

Story

On **November 6–8, 2026**, Barcelona fills up. And when we say fills up, we mean it.

They arrive by plane from Tokyo, Buenos Aires, Lagos. By boat from Genoa and Marseille. Some crossed the Pyrenees by bicycle — laptop in the backpack, Python sticker on the helmet. Someone walked all the way from Valencia, saying they *"needed time to think about a bug they'd been chasing for three weeks"*. And there are rumours — unconfirmed by the organising team — that at least one attendee arrived by parachute.

Pythonistas from all over Spain. All over Europe. All over the world.

The venue is packed. The energy is electric. And just before the first keynote is about to start, the person in charge of the conference welcome system realises something: **nobody has written the official welcome program**.

Silence on the team's Slack channel.

Then someone types:

"Wait... aren't we all programmers?"

Someone else replies:

"Yes, but it has to be in Python, obviously."

And a third person, the fastest of them all, already has their editor open.

Problem Statement

Write a **Python** program that prints the official welcome message of PyConES 2026.

Input Format

This problem has **no input**. Do not read anything 😊.

Constraints

1. There is **no input** for this problem.
2. The **output must be exactly the 15 characters**: Hello, PyConES!

Output Format

A single line with the exact text:

```
Hello, PyConES!
```
